LYNX

Multiples and Mixing

RRP £59

Wholesale £35

BLACK

WHITE

Lynx is a three-in-one utility for routing and combining signals in just 4HP. A buffered multiple splits one CV or audio signal to three destinations without voltage drop, a precision adder sums two inputs to two outputs, and a three-channel mixer averages sources without clipping. Three essential functions, one slim panel.

FEATURES

— 1:3 buffered multiple, ideal for distributing note CV to three VCOs
— 2:2 precision adder with unity gain and 0.1% resistors
— 3:1 averaging mixer, gain of 1/3 per channel, suited to mixing oscillators
— All inputs DC-coupled, audio-rate signals accepted
— Input impedance: 1M (multiple), 100k (mixers)
— Based on open-source Mutable Instruments Links design
— FR4 fibreglass panel

SPECIFICATIONS

SKU	EUR-LYN-BLA (Black) · EUR-LYN-WHI (White)
Format	Eurorack
Width	4HP
Depth	25mm
+12V Current	15mA
-12V Current	15mA

STOCKING & AVAILABILITY

Factory assembled PCB & SMT, THT hand finished and calibrated in Edinburgh, Scotland. Brand New. Ships tracked and insured within 1 business day. Enquiries: **eastcoastmodular.co.uk**
