

PACHINKO

Random Sampler

RRP £199

Wholesale £110

Pachinko is a random sampler and probabilistic gate/CV generator. It captures and replays randomness — generating clocks, gates, and melodic sequences with just the right amount of controlled chaos. Whether you want gentle variation or wild unpredictability, Pachinko puts it all under CV control. An essential module for generative and evolving patches.

FEATURES

- Dual section: T (gates/clocks) and X (CV outputs)
- Deja Vu knob to loop and replay random sequences
- Spread, Bias and Steps controls for musical randomness
- External clock input with clock multiplication/division
- 3 gate outputs (T1, T2, T3) and 4 CV outputs (X1, X2, X3, Y)
- FR4 fibreglass panel

SPECIFICATIONS

Format	Eurorack
Width	12HP
Depth	25mm
+12V Current	80mA
-12V Current	20mA

STOCKING & AVAILABILITY

Factory assembled PCB & SMT, THT hand finished and calibrated in Edinburgh, Scotland. Brand New. Ships tracked and insured within 1 business day. Enquiries: eastcoastmodular.co.uk
